

Final Reflection

- What did you learn about yourself?
 - This class helped me feel a lot more confident in my choice of major. I was very on edge between software engineering and computer science this semester helped reassure me.
- About the software development process?
 - I learned that the software development process is not a one and done thing. It is continuous and on working upkeep and communication is constant even after a project is “finished”
- About your struggles with the tech stack and tools?
 - I don't believe I struggled with the tools we were provided, I just felt as if they were unnecessary. In theory the trello board is a great way to keep track of work but in practice it did not help much.
- Where could you improve, personally, and in this course?
 - I still feel like I could improve my time management skills to a much greater level. My biggest struggle was meeting deadlines and physically bringing myself to do the work.
